Lazimpat, Kathmandu, Nepal

TECHNICAL SKILLS

Languages: C#, Python, Java, PL/SQL, C/AL, AL

Frontend: React, HTML, CSS

Backend & Frameworks: Laravel, C#.NET

Databases: SQL Server, ClickHouse, Redis, PostgreSQL, Qdrant (vector database)

Cloud & DevOps: Azure, Docker, GitHub, SSL certificate management

AI / Machine Learning: RAG systems, TensorFlow, Scikit-Learn, Pandas, NumPy, Qiskit

ERP: Microsoft Dynamics 365 Business Central

PROFESSIONAL EXPERIENCE

Technical Consultant, Voyager Nepal (Oct 2024 – Jun 2026)

- Developed full-stack applications using C# and React.
- Built a RAG pipeline that extracted business intelligence from Business Central .app files and stored embeddings in a Qdrant vector database, giving a chatbot under development access to enterprise data.
- Developed machine learning models in Python to forecast data for the same enterprise systems.
- Maintained Docker containers running Qdrant, Redis, ClickHouse and other services.
- Worked on an application hosted on Azure.
- Provided technical consultancy on Business Central ERP to clients and developed customizations according to client specifications.

Agile Solutions (Aug 2022 – Oct 2024)

Jr. Technical Consultant (Jun 2023 – Oct 2024) | Associate Technical Consultant (Dec 2022 – Jun 2023) | Technical Trainee (Aug 2022 – Nov 2022)

- Developed customizations on Business Central according to client specifications.
- Created and consumed APIs for integrating data between cloud and on-premise environments, syncing POS to database, and for IRD requirements.
- Created and managed databases and database triggers for data security.
- Managed the code base in GitHub repositories.
- Provided technical consultancy on Business Central ERP to clients, and maintained and configured Business Central and SQL Server instances under Annual Maintenance Contracts.
- Created and managed SSL certificates; managed server and network issues of clients' on-premise servers.

PROJECTS

Quantum Reinforcement Learning for Quantum Circuit Optimization

- Created a web app to optimize quantum circuit creation for the Bernstein–Vazirani algorithm using Proximal Policy Optimization, Qiskit and Streamlit in Python.

E-Commerce Website

- Created an e-commerce website using Laravel with product filters, site search, navigation, cart and checkout, online payment, and product reviews and comments.

EDUCATION

The British College (2020 – 2023)

BSc Computing (Hons), First Class Honours

GIHE (2017 – 2019)

A-Levels
