Lazimpat, Kathmandu, Nepal

TECHNICAL SKILLS

Languages: C#, Python, TypeScript, AL, C/AL, PL/SQL, Java

Frontend: React, TypeScript, HTML, CSS

Backend & Frameworks: .NET (ASP.NET Core, EF Core), FastAPI, Laravel

Databases: SQL Server, PostgreSQL, ClickHouse, Redis, Qdrant (vector database)

Cloud & DevOps: Azure, Azure DevOps, Docker, GitHub, Hangfire, OpenTelemetry, SSL certificate management

AI / Machine Learning: LLM integration (Claude, DeepSeek, Azure OpenAI), RAG systems, Prophet, Scikit-Learn, TensorFlow, Pandas, NumPy, Qiskit

ERP: Microsoft Dynamics 365 Business Central, LS Retail (LS Central), Dynamics NAV (C/AL)

PROFESSIONAL EXPERIENCE

Technical Consultant, Voyager Nepal (Oct 2024 – Jun 2026)

- Core developer and top contributor on Aurora BI, an AI analytics platform for Business Central and LS Retail (.NET, React/TypeScript, Python): it reads a client's ERP schema, designs a ClickHouse warehouse, builds the ETL and dashboards, and answers plain-English questions.
- Built its natural-language query engine (LLM-generated ClickHouse SQL with self-healing retries and SQL-injection guards) and a RAG knowledge base that parses Business Central .app files into Qdrant embeddings.
- Developed the Python/FastAPI ML service (Prophet forecasting, Celery training jobs), plus SaaS and reporting features: multi-tenancy, subscription tiers and usage metering, KPI targets, alert digests and escalation workflows.
- Migrated the platform from SQL Server to PostgreSQL and added OpenTelemetry observability, Hangfire background jobs and caching; built data-source connectors and identity services (authentication, roles, 2FA).
- Upgraded LS Retail customizations to Business Central 27 / LS Central 27.1 for a Middle East retail group, built an Azure OpenAI retail-insights chatbot inside Business Central, and developed capex controls, job card extensions and VAT reports.
- Maintained Docker containers running Qdrant, Redis, ClickHouse and other services; worked on an Azure-hosted application.

Agile Solutions (Aug 2022 – Oct 2024)

Jr. Technical Consultant (Jun 2023 – Oct 2024) | Associate Technical Consultant (Dec 2022 – Jun 2023) | Technical Trainee (Aug 2022 – Nov 2022)

- Developed customizations on Business Central according to client specifications, including warehouse-management extensions and custom reports for an overseas client.
- Built Nepal IRD localization features such as TDS posting on purchases and sales, and created and consumed APIs for cloud ↔ on-premise integration and POS-to-database sync.
- Integrated a hospital's Dynamics NAV system (C/AL) with the national health insurance scheme through FHIR APIs: eligibility checks, claim codes and co-payments.
- Created and managed databases and database triggers for data security, and managed the code base in GitHub repositories.
- Provided technical consultancy on Business Central ERP to clients, and maintained and configured Business Central and SQL Server instances under Annual Maintenance Contracts.
- Created and managed SSL certificates; managed server and network issues of clients' on-premise servers.

PROJECTS

Quantum Reinforcement Learning for Quantum Circuit Optimization (BSc dissertation)

- Trained a Proximal Policy Optimization agent (Stable Baselines3) in a custom Qiskit/Gym environment to generate quantum circuits matching a hidden bit string (Bernstein–Vazirani), with a Streamlit app for interactive use.

E-Commerce Website

- Created an e-commerce website using Laravel with product filters, site search, navigation, cart and checkout, online payment, and product reviews and comments.

EDUCATION

The British College (2020 – 2023)

BSc Computing (Hons), First Class Honours

GIHE (2017 – 2019)

A-Levels
